

BLEACHING KIT

We have found that it is best to bleach the head after it has been mounted. Assuming the mount is complete, proceed as follows:

To a clean container, add enough liquid (solution #1) which will cover the entire head when brushed on.

To this, add packet #2 (use proportionally the same amount – that is, if 1/2 the liquid is used, use 1/2 the powder, etc.). Then add enough powder from packet #3 to thicken solution to the consistency of cream.

Make sure the hair is flat and smoothed out. Brush the mixture on the surface of the hair. Do not let it penetrate to the skin. Let mixture sit on the hair from 10 to 30 minutes, depending on the amount of bleaching required. Do not let it sit longer or it will burn the hair.

Now, rinse the mixture off with a water hose quickly without totally saturating the mount. Be sure all the water rinses off the head as it is being washed.

Process may be repeated in areas where it is necessary. Do not re-bleach the whole head. Let the mount drip dry. Comb and fluff. For best results, dry head in direct sunlight whenever possible.
