

EYE-LEVEL ADAPTER INSTRUCTIONS

KIT INCLUDES:

8mm adapter
13mm adapter
18mm adapter

PROCEDURE:

1. Choose an adapter size that is closest to, or slightly larger than, the eye being set.
2. Place a small drop of superglue gel on one side of the adapter end (Placing it in the middle may make it difficult to remove later).
3. Attach the adapter to the center of the end of the EYE-LEVEL for ease in rotation (On some species, such as bear, it may be necessary to attach the adapter off to one side, rather than the center of the EYE-LEVEL. This will allow clearance for the tool in the muzzle area).
4. When finished using the adapter, simply pop it off with your thumb and gently sand off any superglue residue that might be left.

*NOTE: Other size adapters available by special order.
